engineering brief (phase 1)

Overall form: stylized Noah’s Ark toy with rounded boat hull, central cabin, pitched roof, front ramp, and small animal figures.

Overall size: 180 mm long, 70 mm wide, 95 mm tall including roof.

Hull: curved rectangular hull, 180 mm long x 70 mm wide x 35 mm high, with 4 mm wall thickness and raised edges.

Cabin: centered rectangular cabin, 95 mm long x 48 mm wide x 38 mm high, sitting on top of the hull.

Roof: pitched roof with 45° slopes, 110 mm long x 60 mm wide x 28 mm high, with slight 2 mm overhang on all sides.

Deck details: add simple rail posts 4 mm diameter x 14 mm high, spaced every 18 mm along both sides.

Ramp door: front-facing arched ramp, 32 mm wide x 28 mm high, engraved outline 1.5 mm deep; optional semi-circular cutout.

Animals: include simplified pairs of small raised silhouettes, about 18 mm tall, on each side of the cabin.

Symmetry: hull, cabin, and roof symmetric about the centerline; animal details can be mirrored left-to-right.

Material/aesthetic: intended for PLA or PETG, warm wood-brown hull, tan cabin, dark roof, rounded child-friendly edges.

Printability: flat-bottom hull for easy printing, minimum feature thickness 2 mm, avoid unsupported overhangs.
